Spend more time with our speakers and our Careers and HR Management team. Meet Jeremy Hein, Robynne Templin (Box), and Blake Allen

Vendor Tables Executive Conversation and Engineer Labs

MixMode is the leader in delivering AI cybersecurity solutions at scale and is the first to introduce a Third-Wave, context-aware AI approach that automatically learns and adapts to dynamically changing environments. MixMode offers a patented, self-supervised learning Platform designed to detect known and unknown threats in real time across cloud, hybrid, or on-prem environments.

With Paramify, you can generate complete SSPs, ATO packages, and manage POA&Ms in just hours, not months, freeing you up to focus on meaningful security work instead of getting stuck in paperwork prison. Our OSCAL-based platform makes GRC documentation a breeze by gathering your current stack—people, places, and things—and automating your ATO and certification deliverables.

Automation is AI's primary job to be done for Cybersecurity. The network is no longer the perimeter, and firewalls can no longer protect devices or servers. Even a locked-down identity isn't enough to defend against today's adversaries, who are always one step ahead. They have the same—if not better—tools as we do and only need to be right once. Our speed is the key to protecting our critical IT/OT

About Sprinto: Automating Information Security Compliances & Privacy Laws for fast-growing SaaS companies. Use Sprinto to obtain information security compliance, close enterprise deals faster, and pass vendor security assessments easily.

Stellar Cyber's Automation-driven Security Operations Platform, including NG-SIEM and NDR and powered by Open XDR, delivers comprehensive, unified cybersecurity without complexity. It empowers lean security teams of any skill level to secure their environments successfully. As part of this unified platform, Stellar Cyber's Multi-Layer AI™ enables enterprises, MSSPs, and MSPs to reduce risk with early and precise threat identification and remediation while slashing costs, retaining investments in existing tools, and improving analyst productivity. This results in a 20X improvement in MTTD and an 8X improvement in MTTR. The company is based in Silicon Valley. For more information, visit <https://>

Our Vision: Unprecedented Data Transparency

We believe that Respect for Data is the cornerstone of progress. In an increasingly AI-powered digital world, Data should be treated with the respect it deserves, and that starts with privacy and security. Not just security of the infrastructure on which that is stored, but into every permission and operation performed on that data. Only with this fine grained visibility and control, can organizations innovate with confidence and avoid trampling over individual's privacy and data rights.
